

## Why Sentinel?

Safe distancing and contact tracing are essential tools for organizations to mitigate the impact of current and future transmissible viruses. The Omni Sentinel System is a convenient way for organizations to implement and maintain best practices in the workplace.

## Use Cases

Sentinel is ideal for various workplace implementations, including:

- **Hospitals and eldercare facilities**, where person-to-person interaction is frequent, and access to information during outbreaks is critical.
- **Offices, colleges and dormitories**, with limited resources to monitor people movement and interactions across meeting rooms and common areas.
- **Warehouses, shipyards, and food production industries**, where large worksites and numbers of workers make it difficult to ensure compliance.
- **Hotels, resorts and cruise ships**, with difficulties in managing high traffic and large number of short-term visitors.

## Omni Sentinel System

**Sentinel is the workplace companion for health and safety in the pandemic age.**

This end-to-end solution for contact tracing and safe distancing is:

- **Simple:** Sentinel is easy to deploy, with minimal infrastructure required.
- **Safe:** Alerts users when safe distances are breached, stores contact data.
- **Secure:** Limited data (e.g. employee ID) collected, no GPS tracking.

## Key Components of Sentinel

### Sentinel Shield

Compact and wearable, the Shield issues audio and visual warnings, and logs any contact, whenever safe distance is breached.

### Sentinel Scanner

When placed in a strategic location, the Scanner detects configured Shields over a large area, and relays information to the Reader.

### Sentinel Reader

The Reader can be plugged into a PC and, alongside the App, used to monitor the fleet of deployed Shields.

**Sentinel App:** The Sentinel App allows administrators to inquire the contact duration between two individual employees, among other features.

EMPLOYEE 162

EMPLOYEE 73 (09-10-2020 11:40:02) (77.9 mins)

EMPLOYEE 46 (09-09-2020 22:12:00) (37.4 mins)

Sentinel is currently in trials with selected customers.
